Style guide

About

I'm a full-stack developer with a passion for accessibility. I build inclusive web and Java-based applications and have experience in accessibility testing, cross-team collaboration, and training.

Currently, I work for a private company; in my free time, you'll find me tinkering with independent projects to explore new technologies, sharpen my skills, and have fun.

Brand values

Creativity, trust, inclusion, harmony, and sophistication.

Mission

As a natural problem solver, I aim to deliver high-quality code and good vibes.

Target audience

Recruiters and potential freelance clients.

Tone

Funny, casual, personal but professional.

Language

Write in first person. Use contractions to sound natural and approachable.

→ Examples: "Hey there!", "Don't forget your message." "Add your email, so I can answer you." "Don't forget your name, so I'll know who you are".

Purpose

Showcase my work ethic, experience, and a little of my personality through both design and content.

Typography

Primary font for headings: Glass Antiqua

Accent text and body: Crimson Pro

Color palette

Dark Theme

#281439 - Background

#E5A857 - Primary

#D57966 - Accent

#EAE9F0 - Text

Logo

Primary Logo

The primary logo is the horizontal logo composed of the sunshine symbol, the name "gabrielle ynara" set in Glass Antiqua, and the signature dot.

This version is the main representation of the brand and should be used whenever space allows for a wide layout.

Uses:

- Website header
- Hero section
- Printed documents

File name: primary-logo.svg

Minimum size: 140px

Stacked Logo

The stacked logo is a vertical composition of the sunshine symbol above "gabrielle" and "ynara."

This version should be used when vertical space is available or when horizontal space is limited.

Uses:

- Mobile layouts

File name: stacked-logo.svg

Minimum size: 120px

Monogram

The monogram features the sunshine symbol combined with the initials "gy" and the signature dot.

It is designed for small-scale applications where the full wordmark would be unreadable.

Uses:

- Favicon
- Mobile navbar icon

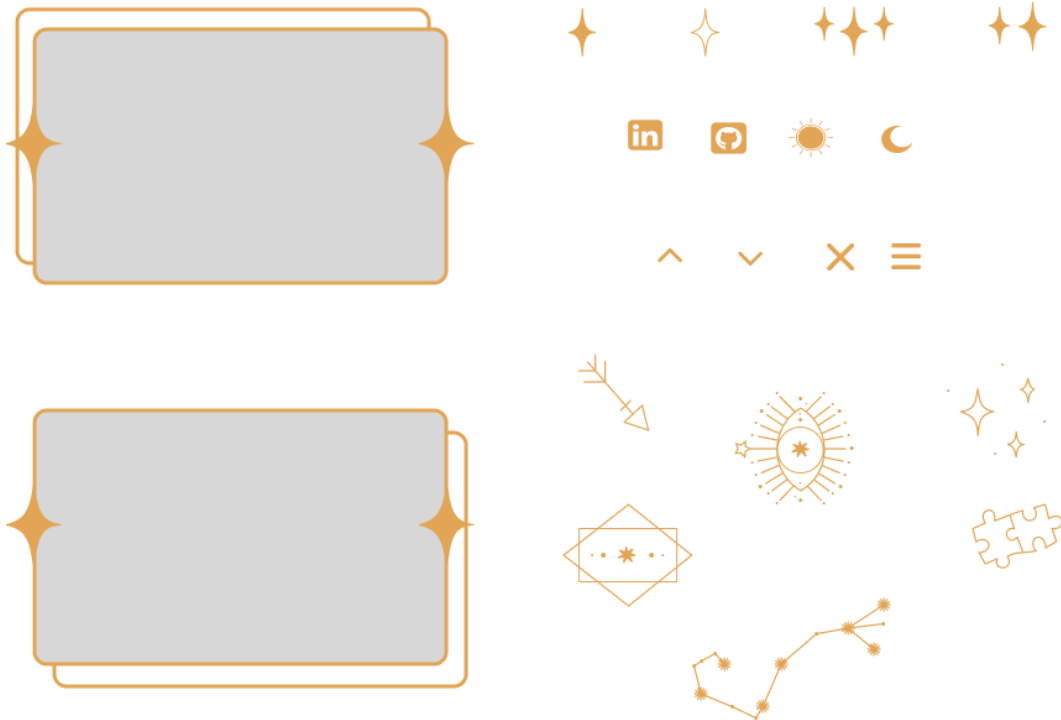

File name: monogram.svg

Minimum size: 32px

Imagery and iconography

Imagery should feel warm, crafted, and slightly whimsical.

▼ To Do

▼ Define visual identify

- ☒ Look for inspiration
- ☒ ~~Create a mood board~~
- ☒ ~~Typography~~
- ☒ ~~Logo~~
- ☒ ~~→ Name~~
- ☒ ~~→ Initials~~
- ☒ ~~Export logos to svg~~
- ☒ ~~Color palette~~
- ☒ ~~imagery and iconography~~

▼ Create wireframe

Roughly position placement, create mobile-first and desktop wireframe

- ☒ Home
- ☒ Resume
- ☒ Projects
- ☒ ~~Detailed Project~~

☒ Contact

▼ Define design

Define a design for each page, mobile-first and desktop versions (small, medium, and big screen).

☒ Home

☒ mobile

☒ desktop

☒ Projects

☒ mobile

☒ desktop

☒ Detailed Project

☒ mobile

☒ desktop

☒ Resume

☒ mobile

☒ desktop

☒ Contact

☒ mobile

☒ desktop

▼ Website flow

Define a flow for the website, like a visitor gets to the home page, checks projects, and sends a message at the end.

→ call to action: let's connect after the introduction paragraph

→ call to action: see more projects after the Projects highlight.

▼ Random Ideas

- Add puzzle shapes and maybe constellations and stars as background decoration.
- Have my name as a hero in the landing page, as the user scrolls down, the name zooms out to the left towards the nav icon.

Add reduced-motion option. Maybe an accessibility menu with reduced-motion, and color blindness adjustments

- Have the background fade from hero to background.
- Add a big "Let's connect" button?
→ redirects to contact page.
- Purple background, with yellow (gold-ish) accents?

Learning Journey

I started by watching YouTube videos and using ChatGPT as a colleague and instructor. Once I had enough context, I ventured into creating a simple version of a Style Guide document.

Before touching layout or visuals, I spent time thinking about what I wanted my portfolio to *communicate* beyond the work itself. With that in mind, I created a mood board for inspiration. Then I explored and tested different fonts; even created an empty mock page with headings and paragraphs to see how they worked together.

Once typography was set, I drafted several logo ideas. I experimented with incorporating the Scorpio constellation as the "Y" in Ynara, tried versions with moons, stars, and puzzle pieces, but ultimately the sunshine symbol felt like the best fit for my brand. From there, I drew the three logos: the primary, the stacked version, and the monogram.

At that point, I paused to decide whether I should learn SVG illustration right away or continue following my to-do list. I chose to move forward with the design phase and treat SVG creation as part of implementation, since it's more technical and tied to rendering than to the creative process.

Next, I wanted to jump into defining layouts, but color palette selection was still on my list. So I watched more content, researched, and used ChatGPT to understand concepts and find inspiration. After finalizing the palette, I moved on to wireframes, first sketching mobile layouts on my iPad, then switching to Figma. I created desktop wireframes for all pages, then designed both mobile and desktop versions page by page, building components along the way.

The final design task was deciding on decorative elements, background textures, and possible animations. Once I gathered all imagery, I recreated it in Figma and exported everything as SVG, which wrapped up the design phase.

Now that all the design work is complete, the next step is implementing the project.

Below is the link to the Figma project:
